AMENDMENTS TO THE TITLE:

Please amend the Title as follows:

CAP CAB SUSPENSION DEVICE

AMENDMENTS TO THE ABSTRACT:

Please amend the Abstract as follows:

Method and device for providing a suspension for suspending a cab (4) on a vehicle frame (3) having using vertical orientation for both a first element (1) adapted mainly for reducing transmission of that absorbs shocks/vibrations from the vehicle frame (3) to the cab (4) and a .-A second element (2) is included that acts as a is adapted mainly for taking up load support between cab (4) and vehicle frame (3) in the event of, for example, accident situations. The first and second elements (1, 2) are arranged on the device, which connects serially in the vertical direction of the vehicle. The device includes means (5) for connecting the cab (4) to and the vehicle frame (3)[,] by and the first and second elements (1, 2) are arranged on the connecting means (5). The connecting means (5) is connected firmly to the first element (1) and also to the cab (4). The connecting means (5) is connected firmly to the first element (1) and also to the cab (4), or alternatively to the vehicle frame (3). The connecting means (5) constitutes a firm connection between the first element (1) and the cab (4), or alternatively the vehicle frame (3).
